

EMOTIONAL INTELLIGENCE (HUM1002)

**DR. KAVITHA RAJAYOGAN,
ASSISTANT PROFESSOR,
VIT BUSINESS SCHOOL**

UNIT I

Introduction to Emotional Intelligence: Emotional Intelligence. Importance of Emotional intelligence. Benefits of EI, Understand the difference between Trait EI and Ability EI, The difference between IQ and EQ, concept of SQ (social quotient) and AQ (adverse quotient), Measuring Emotional Intelligence, 5 Dimensions of Trait EI Model Self Awareness (SA) Managing Emotions (ME) Motivation (M) Empathy (E) Social Skills (SS) Determine your EQ. Skills in emotional Intelligence: Four Skills in Emotional Intelligence,

Emotional Intelligence - Meaning

Emotional Intelligence (EI) or Emotional Quotient(EQ) refers to the ability to recognize, understand, and manage one's own emotions while also being able to influence and interact effectively with others' emotions.

Life is a comedy for those who think and a tragedy for those who feel.
-HORACE WALPOLE

Evaluate your EI

Google Form

Mixed EI - Components of EI

Goleman developed a performance-based model of EQ to assess employee levels of emotional intelligence, as well as to identify areas of improvement. The model consists of five components

Components of EI

- **Self-awareness:** The ability to recognize and understand your own emotions, strengths, weaknesses, values, and how they affect your thoughts and behavior.

Components of EI

Example

A leader understands:

“My team performs better when I involve them in decision-making rather than giving orders.”

They adapt their leadership style accordingly.

This shows self-awareness of leadership impact.

Components of EI

- **Self-regulation:** The ability to manage your emotions in a healthy way, including controlling impulsive feelings and behaviors, adapting to changing circumstances, and maintaining a positive outlook.

Components of EI

Handling Criticism from a Manager

An employee receives negative feedback during a performance review.

Instead of arguing or getting defensive, the employee:

- Listens carefully
- Asks for clarification
- Uses the feedback to improve performance

This shows **emotional control and maturity**, which are key aspects of self-regulation.

Components of EI

- **Motivation:** The ability to harness emotions to pursue goals with energy and persistence. This includes a strong drive to achieve, optimism in the face of failure, and a commitment to personal and professional growth.

Components of EI

Example

A sales executive fails to meet targets for two consecutive months.

Instead of giving up, they:

- Analyze what went wrong
- Change their sales approach
- Work harder to achieve future targets

Persistence despite setbacks reflects strong motivation.

Components of EI

- **Empathy:** The capacity to understand and share the feelings of others. This involves recognizing emotional cues, considering others' perspectives, and responding appropriately to their emotional needs.

Components of EI

Example:

A team leader notices that a junior employee is quiet in meetings.

They:

Encourage participation

Create a safe space for sharing ideas

Components of EI

- **Social skills:** The skills needed to manage relationships effectively. This includes effective communication, conflict resolution, teamwork, and building rapport with others.

Components of EI

Example:

During a team meeting, different departments have different opinions about a project timeline.

An employee listens carefully, waits for their turn, and explains their ideas clearly using simple language. They ask questions to ensure understanding and avoid interrupting others.

The team reaches clarity and avoids confusion.

This shows **communication clarity, listening, and respect**—key social skills.

Low EI

Manager is not having control over emotions

Manager is a moody person

Manager is not able to understand the feeling of others

Blaming Others

Low Empathy

Not Listening

Aggressive

Outburst

Not Accepting Change

Low EI and High EI

LOW
EMOTIONAL
INTELLIGENCE

Aggressive
Demanding
Egotistical
Bossy
Confrontational

Easily Distracted
Glib
Selfish
Poor Listener
Impulsive

Resistant to Change
Passive
Un-Responsive
Slow
Stubborn

Critical
Picky
Fussy
Hard to Please
Perfectionistic

HIGH
EMOTIONAL
INTELLIGENCE

Assertive
Ambitious
Driving
Strong-Willed
Decisive

Warm
Enthusiastic
Sociable
Charming
Persuasive

Patient
Stable
Predictable
Consistent
Good Listener

Detailed
Careful
Meticulous
Systematic
Neat

Low EI and High EI

Dominant / Action-Oriented Personality (Red)

Low Emotional Intelligence

Acts without considering others' feelings.

High Emotional Intelligence

Leads confidently while respecting others.

Influential / Social Personality (Yellow)

Low Emotional Intelligence

Focuses on self and lacks emotional control.

High Emotional Intelligence

Builds positive relationships and motivates people.

Low EI and High EI

Steady / Supportive Personality (Green)

Low Emotional Intelligence

Avoids change and communication.

High Emotional Intelligence

Provides emotional support and reliability.

Dedicated / Detail-Oriented Personality (Blue)

Low Emotional Intelligence

Over judgmental and rigid

High Emotional Intelligence

Maintains high standards with emotional balance.

Intelligence Quotient (IQ)

Intelligence Quotient is an estimate of how well someone can think, and solve problems compared to others.

Intelligence quotient is one of the most widely recognized metrics in psychological assessment.

It's a **score** derived from standardized tests designed to measure certain cognitive abilities, such as:

- ✓ Logical reasoning
- ✓ Problem-solving
- ✓ Pattern recognition
- ✓ Memory
- ✓ Mathematical and verbal skills

Typical IQ scale:

Above 130 → very high intelligence

Around 100 → average intelligence

Below 70 → significantly below

EQ

EMOTIONAL INTELLIGENCE

- Understand, manage, and express emotions
- Empathy, self-awareness, and social skills
- Communication, relationships, and managing stress
- Developed and strengthened over time

IQ

IQ

- Logical reasoning, memory, and cognitive ability
- Problem-solving, math, verbal and spatial skills
- Academic learning, testing, and analytical tasks
- Largely influenced by genetics, but can be trained

Low IQ and High EQ

SO, WHICH ONE IS BETTER?

OR

Low IQ and High EQ

Low IQ + High EQ = Success

Even if a person is not academically brilliant, strong emotional intelligence—such as empathy, self-control, motivation, and social skills—can still lead to success in life and career.

Example:

A student who is average in studies but communicates well, manages stress, works in teams, and stays motivated often performs better in real life.

Low IQ and High EQ

High IQ + Low EQ = Success

High intelligence and technical knowledge can also bring success, but emotional weaknesses (poor communication, low empathy, anger issues) may limit long-term growth or leadership roles.

Example:

A very intelligent employee may struggle at work if they cannot handle criticism or work with others.

Importance of EI

- Helps in better communication and relationships.
- Enhances decision-making and conflict resolution.
- Improves workplace productivity and leadership skills.
- Aids in stress management and emotional well-being.

Benefits of EI

- ✓ Enhanced Leadership Skills
- ✓ Improved Team Collaboration
- ✓ Effective Communication
- ✓ Adaptability and Resilience
- ✓ Conflict Resolution
- ✓ Increased Empathy
- ✓ Stress Management
- ✓ Increased Job Satisfaction
- ✓ Career Advancement

Models of EI

- Trait EI
- Ability EI
- Mixed EI

Trait EI

- Trait EI
 - Developed by Konstantinos V. Petrides
 - EI is a personality trait—how people perceive their own emotional abilities.

It is generally measured by self reports – How well do you think you can manage your emotions.

Trait EI

- This model views EI as a collection of emotional and social competencies, skills, and behaviors that influence how individuals cope with environmental demands and pressures.
- It focuses on personal traits and characteristics that contribute to emotional functioning.

Components of Trait EI

Components of Trait EI

- **Emotionality** - reflects how well a person perceives and expresses emotions in themselves and others.
- **Sociability** - focuses on social competence and influence in interpersonal situations.
- **Self-Control** - represents the ability to regulate emotions and impulses, especially under pressure.
- **Well-being** - reflects overall emotional positivity and life satisfaction.
- **Self-Motivation / Adaptability** - reflects a person's drive and flexibility in changing situations.

Ability EI

- **Ability EI**
 - The Emotional Intelligence (EI) Ability Model, developed by Peter Salovey and John Mayer, defines emotional intelligence as a set of cognitive abilities that enable individual to perceive, understand and manage emotions effectively.
 - Ability EI is your actual skills in handling emotions.
 - This is measured through performance test

Ability EI

MSCEIT

- MSCEIT stands for **Mayer–Salovey–Caruso Emotional Intelligence Test**.
- It measures **Ability Emotional Intelligence**, which views EI as a set of mental abilities related to processing emotional information—similar to how IQ measures cognitive abilities.

Ability EI - MSCEIT

- Perceiving Emotions – Non verbal signals (Facial Expression, Body Movements etc)
- Reasoning with Emotions – to promote the thinking using emotions
- Understanding Emotions - To interpret the cause of emotions
- Managing Emotions - Controlling and managing emotions

Difference between Trait EI and Ability EI

Basis	Trait Emotional Intelligence	Ability Emotional Intelligence
Conceptualization	EI is viewed as a personality trait	EI is viewed as a cognitive ability
Developed by	Konstantinos V. Petrides	Peter Salovey & John Mayer
Focus	Individuals' self-perceptions of emotional abilities	Individuals' actual ability to process emotional information
Nature	Subjective	Objective
Measurement method	Self-report questionnaires	Performance-based tests

SQ (social quotient)

- SQ or Social Intelligence measures an individual's ability to build and maintain social networks, interact with others, and navigate complex interpersonal relationships.
- **Example** : A manager who listens actively, resolves conflicts calmly, and maintains positive relationships with team members shows **high SQ**.

Elements of SQ (social quotient)

- Social awareness and sensitivity
- Communication skills (verbal & non-verbal)
- Empathy and respect for others
- Teamwork and collaboration
- Conflict management and networking

Importance of SQ

- Enhances leadership effectiveness
- Improves teamwork and workplace harmony
- Builds trust and cooperation

AQ (adverse quotient)

- Adversity Quotient (AQ) is the ability to face, withstand, and overcome difficulties, challenges, and setbacks in life or work.
- **Example** - An entrepreneur who treats failure as feedback and continues trying despite repeated setbacks demonstrates **high AQ**.

Elements of AQ (adverse quotient)

- **Control** – How much control you believe you have over adversity
- **Ownership** – Taking responsibility to improve the situation
- **Reach** – Limiting the impact of adversity on other areas of life
- **Endurance** – Belief about how long adversity will last

Measuring Emotional Intelligence

- MSCEIT (Perceiving Emotions, Using Emotions, Understanding Emotions, Managing Emotions)
- TEIQue (Well-being , Self-control, Emotionality, Sociability)

Measuring Emotional Intelligence

- EQ-i(Bar-on Model) (Intrapersonal, Interpersonal, Stress Management, Adaptability , General Mood)
- ECI, ESCI (Self-Awareness, Self-Management, Social Awareness, Relationship Management)

Determine your EQ.

Determine your EQ.

Wong's Emotional Intelligence Scale (WEIS)

- ✓ Measures ability-based emotional intelligence
- ✓ Focuses on how well a person can perceive, understand, use, and manage emotions
- ✓ Often used in academic and workplace research

Determine your EQ.

Emotional and Social Competence Inventory (ESCI)

- ✓ Developed by Daniel Goleman and colleagues
- ✓ Measures emotional and social competencies like:
 - Self-awareness
 - Self-management
 - Social awareness
 - Relationship management
- ✓ Common in leadership and organizational settings
- ✓ Often uses 360-degree feedback

Determine your EQ.

Mayer-Salovey-Caruso Emotional Intelligence Test (MSCEIT)

- ✓ A well-known ability-based EI test
- ✓ Assesses how well someone can:
 - Identify emotions
 - Use emotions to think
 - Understand emotions
 - Manage emotions
- ✓ Performance-based

Determine your EQ.

Emotional Quotient Inventory 2.0 (EQ-i 2.0)

- ✓ A self-report EI assessment
- ✓ Measures emotional and social functioning, such as:
 - Stress management
 - Adaptability
 - Interpersonal skills
- ✓ Widely used in clinical and workplace settings

Determine your EQ.

Trait Emotional Intelligence Questionnaire (TEIQue)

- ✓ Focuses on trait EI (emotional self-perceptions)
- ✓ Looks at how people see themselves emotionally
- ✓ Includes traits like emotionality, well-being, and self-control

Determine your EQ.

Profile of Emotional Competence (PEC)

- ✓ Measures emotional competencies at both:
 - Personal level (self)
 - Social level (others)
- ✓ Balances emotional knowledge with emotional behavior

Determine your EQ.

Skills in emotional Intelligence

4 SKILLS OF EMOTIONAL INTELLIGENCE

Skills in emotional Intelligence

Self-Awareness

“What am I feeling and why?”

- ✓ Ability to recognize and understand your own emotions
- ✓ Helps you know:
 - What emotions you are experiencing
 - What triggers them
 - How they affect your thoughts and behavior
- ✓ This is the foundation of emotional intelligence

Example: Realizing you are stressed because of workload, not because of others.

Skills in emotional Intelligence

Self-Management

“If I don’t like what I’m feeling, what am I going to do about it?”

Ability to control and regulate your emotions

Includes:

- Managing stress
- Controlling impulses
- Staying calm and positive

Helps you respond thoughtfully instead of reacting emotionally

Example: Staying calm during an argument instead of shouting.

Skills in emotional Intelligence

Social Awareness

“What are others feeling and why? What’s my role in it?”

Ability to understand others’ emotions

Involves:

- Empathy
- Reading body language and tone
- Understanding social situations

Helps build strong relationships

Example: Noticing a friend is upset even though they haven’t said it.

Skills in emotional Intelligence

Social Management (Relationship Management)

“If the atmosphere is negative, what am I going to do to change it?”

Ability to manage emotions in relationships

Includes:

- Effective communication
- Conflict resolution
- Influencing and teamwork

Helps create positive social environments

Example: Resolving conflict between teammates by listening and encouraging

Emotional Intelligence

Case study 1

Ananya is a team leader in a marketing firm handling a tight-deadline campaign. When the client suddenly demands major changes, Ananya becomes visibly stressed and raises her voice during a team meeting. She blames team members for delays and ignores their concerns about workload.

As a result, the team becomes silent and demotivated. Errors increase, and one employee requests leave due to stress. After feedback from HR, Ananya reflects on her behavior. She begins to manage her emotions, listens actively to her team, and discusses realistic timelines. She also appreciates the team's efforts.

Within weeks, team morale improves, coordination increases, and the campaign is delivered successfully.

Questions

1. Which **EI components** were missing in Ananya's initial behavior?
2. How did poor emotional regulation affect team performance?
3. What EI skills helped Ananya improve the situation?
4. How can self-awareness change leadership outcomes?

Thank you
